## Providing water facility to village

With funding from Henkel's Make an Impact on Tomorrow (MIT) initiative, Henkel Indonesia has completed a water supply revitalization project in Pasuruan.

In collaboration with Daya Pertiwi Foundation, the project resulted in the installation of water facility within the Ngembal Village, where more than 2,000 people reside. Before this, they had to walk far to collect water for their daily needs. Many employees from Henkel Indonesia's adhesive plant in Pasuruan volunteered for the effort, helping to install the water pipes and with painting works.
